MIDIVERSE MODULAR

Frequency
indicator LED

Frequency knob

8HP
Draws 10mA from the +12 rail and
10mA from the -12 rail

Influencing control voltage attenuator
when a signal is present at the CV IN jack
<u>Down</u> = Less influencing
control voltage
<u>Up</u> = More influencing
control voltage

This slider changes the shape of the
waveform present at the SHAPE OUT jack
<u>Down</u> = Triangle
<u>Up</u> = Square (ish)
Slider also acts as an attenuator when a
signal is present at SHAPE CV IN jack

Frequency range switch
Slow/Fast

Influencing control voltage
input

Variable waveform output

Variable waveform shift
control voltage input

Triangle waveform output
